DISCOVER OUR BIO-WASTE SOLUTIONS

GREENER FUTURE

In a move towards a greener future, a lot of countries and international organizations enact legislation aimed at the management of bio-waste. There's a lot of questions about this 'difficult' waste fraction. And specifically about the container solutions. Luckily, we have the answer. We installed over 1.000 bio-waste containers in the past 10 years. In Belgium we are even responsible for the collection of these waste fractions. Being both a producer and a service provider makes us unique.

“ We installed over 1.000 bio-waste containers in the past 10 years.

EFFICIENT & DURABLE

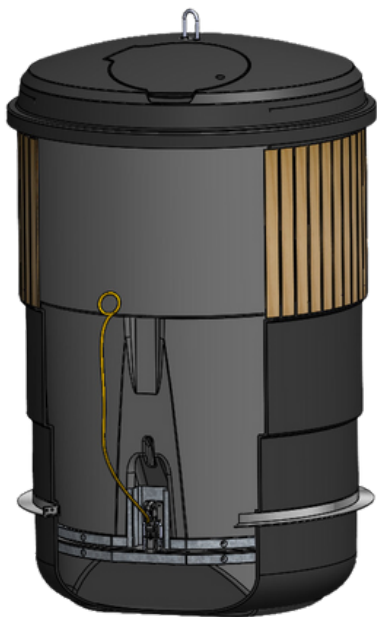

Traflux is at the forefront of waste management innovation. We offer a range of durable semi-underground containers designed to meet your needs. Our bio-waste containers are equipped with state-of-the-art features that make the collection and processing of bio-waste more efficient than ever before.

COST-SAVING & SUSTAINABLE

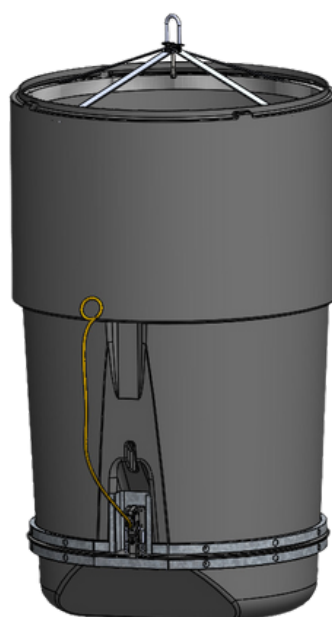

For a one-time empty of our ZBin 1.100 liters for example, the same volume has to be emptied up to 1,5 times compared to a roll container. Or even 9 times compared to a wheelie bin. By minimizing these pickups you operate more efficiently, reducing both operational costs and carbon footprint.

TRAFLUX

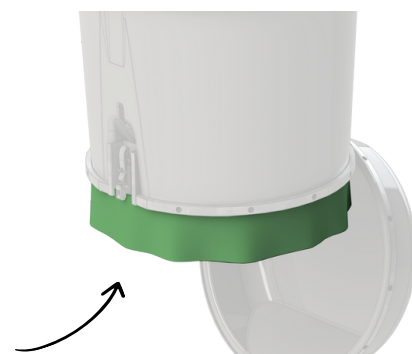

SEMI-UNDERGROUND BIO-WASTE CONTAINERS

Exterior - Cut-out

Internal solution

KEY FEATURES

Placement is important

Installed 150 cm underground for natural insulation and slowing down the fermentation process to prevent the formation of odours.

Technical structure

The opening between the inner container and juice collector is guaranteed by a PVC skirt to prevent leakage. Single hook and rope emptying.

Volumes

Volumes range from 600 L to 1.100 L, including liquid c-collector. Bigger sizes are also possible.

Composition

Rigid high-density polyethylene tank: resistant to leachate acid.
